

CITY OF CONCORD
CONCORD, NORTH CAROLINA
RENEWABLE ENERGY GENERATION RIDER
SCHEDULE RENEW RIDER-01

AVAILABILITY

Upon completion and the City's acceptance of an Interconnection Agreement and Purchase Power Agreement, this schedule is available for electrical energy supplied by Eligible Qualifying Facilities located in the City of Concord, North Carolina service territory which have non-hydroelectric qualifying facilities fueled by trash or methane derived from landfills, hog waste, poultry waste, solar, wind, and non-animal forms of biomass which are interconnected directly with the City's system and which are qualifying facilities as defined by the Federal Energy Regulatory Commission pursuant to Section 210 of the Public Utility Regulatory Policies Act of 1978.

This Schedule is not applicable to a qualifying facility owned by a Customer, or affiliate or partner of a Customer, who sells power to the City from another facility within one-half mile.

Service necessary for the delivery of the Customer's energy production, net of auxiliary load, into the City's system under this Schedule shall be furnished solely to the individual contracting Customer in a single enterprise, located entirely on a single, contiguous premise. Service hereunder shall be restricted to the Net Production of the Customer's generating facilities which may be operated in parallel with the City's system. Service necessary to supply the Customer's total load requirements other than Auxiliary Load, and service necessary to supply the Customer's Auxiliary Load when the Customer's generating facilities are not operating, shall be billed on the applicable schedule(s) of the City. Energy produced and delivered to the City under this Schedule shall not offset or be substituted for power contracted for or which may be contracted for under any other schedule of the City, except at the option of the City under special terms and conditions expressed in writing in the contract with the Customer.

The obligations of the City in regard to service under this Schedule are dependent upon its securing and retaining all necessary rights-of-way, privileges, franchises and permits for such service and the City shall not be liable to any customer or applicant for power in the event it is delayed in, or is prevented from purchasing power by its failure to secure and retain such rights-of-way, rights, privileges, franchises and permits.

SERVICE TYPE

City will furnish 60 Hertz service through one metering point, at one delivery point, at one of the following approximate voltages, where available, upon mutual agreement:

Single-phase, 120/240 volts; or
3-phase, 4-wire, 208/120, 480/277, or 12470/7200 volts, or
3-phase voltages other than the foregoing, but only at the City's option, and provided that the size of the Customer's contract warrants a substation solely to serve that Customer, and further provided that the Customer furnish suitable outdoor space on the premises to accommodate a ground-type transformer installation, or substation, or a transformer vault built in accordance with the City's specifications.

The type of service under this Schedule shall be determined by the City. Prospective customers shall ascertain the available voltage and poly-phase configuration by written inquiry of the City before purchasing equipment.

RATE ^{1*}

Administrative Charge

Residential Rate Classes	\$ 18.00 per month
Commercial Rate Classes	\$ 49.00 per month

All kWh production \$ 5.943 cents per kWh

^{1*} Unless otherwise specified in the City's contract with the Customer, payment of credits under this Schedule do not convey to the City the right to renewable energy credits (RECs) associated with the energy delivered to the City by the Customer.

DEFINITIONS

Nameplate Capacity: The term "Nameplate Capacity" shall mean the maximum continuous electrical output capability of the generator(s) at any time at a power factor of ninety percent (90%).

Net Capacity: The term "Net Capacity" shall mean the Nameplate Capacity of the Customer's generating facilities, less the portion of that capacity needed to serve the generating facilities' Auxiliary Load.

Auxiliary Load: The term "Auxiliary Load" shall mean power used to operate auxiliary equipment in the facility necessary for power generation (such as pumps, blowers, fuel preparation machinery, and exciters).

Net Power: The term "Net Power" shall mean the total amount of electric power produced by the Customer's generating facilities less the portion of that power used to supply the generating facilities' Auxiliary Load.

Month: The term "Month" as used in this Schedule means the period intervening between meter readings for the purposes of monthly billing, such readings being taken once per month.

SAFETY, INTERCONNECTION AND INSPECTION REQUIREMENTS

This Schedule is only applicable for installed generation systems and equipment that comply with the provisions outlined in the City of Concord's Technical Standards Manual Interconnection Procedures, Forms, and Agreements for State-Jurisdictional Generator Interconnections (hereinafter "Interconnection Procedures").

The Customer must submit an Interconnection Request, which must be accepted by the City, pay an application fee, comply with the liability insurance requirements of the Interconnection Procedures and enter into a specific contract providing for interconnection to the City's system.

In order to ensure protection of the City's system, the City reserves the right, at its discretion, to inspect the Customer's generation system and equipment at any time upon reasonable notice to the Customer in an effort to ensure compliance with the Interconnection Procedures. The City reserves the right to disconnect electric service to the premises if the City determines that the Customer's generation system and equipment is not in compliance with the Interconnection Procedures and is being operated in parallel with the City's system.

INTERCONNECTION FACILITIES CHARGE

The Customer shall be responsible for providing suitable control and protective devices on his equipment to assure no disturbance to other customers of the City or to the City itself, and to protect the Customer's facilities from all loss or damage which could result from operation with the City's system.

The City will furnish, install, own, and maintain interconnection facilities as necessary for service under this Schedule including: suitable control and protective devices installed on City equipment to allow operation of the Customer's generating facilities; metering facilities equipped to prevent reverse registration for the measurement of service under this Schedule; and any other modifications to its system required to serve the Customer under this Schedule as determined by the City.

All such facilities shall be subject to a monthly charge under the Extra Facilities provisions of the City's adopted Rate and Fee Schedule, however that the minimum Extra Facilities charge shall not apply. The City reserves the right to install at any time facilities necessary for the appropriate measurement of service under this Schedule and to adjust the Interconnection Facilities Charge accordingly, solely at the option of the City.

When the installed generating system complies with the City of Concord's Interconnection Procedures and no additional interconnection facilities are required, the Facilities Charge shown in the Rate above will be applied to cover the cost of the City's metering and installation.

POWER FACTOR CORRECTION

Unless the Seller is required by the Interconnection Agreement to adjust VARs production to support voltage control, when the Seller consumes consumers VARs supplied by the City or the Seller delivers VARs to the City, the City may reduce the purchased energy measured in kilo-watt hours for that month by multiplying by the average consumed power factor. The average consumer power factor shall be calculated on a monthly basis as the average kWh divided by the average kVAh, where average kVAh shall be the square root of the sum of the average kWh squared plus the average consumed and delivered kVAh squared. The City reserves the right to install facilities necessary for the measurement of power factor and to adjust the Interconnection Facilities Charge accordingly, solely at the option of the City.

PAYMENTS

Credit billings to the Customer shall be payable to the Customer within Thirty (30) days of the date of the bill.

Bills under this Schedule are due and payable on the date of the bill at the office of the City. Bills are past due and delinquent on the twenty-fifth day from the bill date. If any bill is not so paid, the Company has the right to suspend service. In addition, all bills not paid by the twenty-fifth day after the date of the bill shall be subject to a one percent (1½%) late payment charge on the unpaid amount. This late payment charge shall be rendered on the following month's bill and it shall become part of and be due and payable with the bill on which it is rendered.

CONTRACT PERIOD

Each Customer shall enter into a contract which shall specify the amount of capacity committed for delivery throughout the term of the contract. The initial term shall be one (1) year at the Rate shown in this schedule, or as dictated by any applicable Purchase Power Agreement in effect, or for the duration of the City's current requirements contract in effect at the time the City and Customer enter into a contract under which the city purchases electricity from the Customer.

The City reserves the right to terminate the Customer's contract under this Schedule at any time upon written notice to the Customer in the event that the Customer violates any of the terms or conditions of this Schedule or operates its generating facilities in a manner which is detrimental to the City or any of its Customers or fails to deliver energy to the City for six (6) consecutive Months. In the event of early termination of a contract under this Schedule, the Customer will be required to pay the City for costs due to such early termination.

Effective for Bills rendered on and after July 1, 2025.
